

Lab 2

Submission deadline: 6 April 2026

In this laboratory exercise, chi-square testing has been used for feature selection. Consider the top 2 most important features obtained from chi-square testing.

These two features are:

--

Consider the five-fold cross-validation results:

		Mean accuracy	Standard deviation
Logistic regression	All features		
	2 features		
Decision Tree	All features		
	2 features		
Random forest (no of tree = ?)	All features		
	2 feature
